

PHASE 4 – PROJECT PLANNING

Project Title

Script-Controlled ACL – Restrict Record Access Based on Field Value

1. Project Planning

The project is planned to implement a Script-Controlled Access Control List (ACL) in ServiceNow. The ACL will control access to records based on a specific field value.

2. Project Activities

- Identify the required ServiceNow table and field.
- Create the required records for testing.
- Configure the Access Control List (ACL).
- Add the required script condition.
- Implement the access restriction logic.
- Test the ACL with different field values.
- Verify the access results.
- Document the completed project.

3. Technologies and Resources

- ServiceNow Platform
- JavaScript
- Access Control List (ACL)
- ServiceNow Developer Instance
- Test Users and Records

4. Expected Result

The system will restrict or allow record access according to the specified field value. This helps to protect ServiceNow records from unauthorized access.

5. Project Outcome

The planned project will provide field-based access control and improve the security of records in the ServiceNow platform.
